

TMRs Ctrl Msg – User Guide

Version 1 Beta · for Train Managers

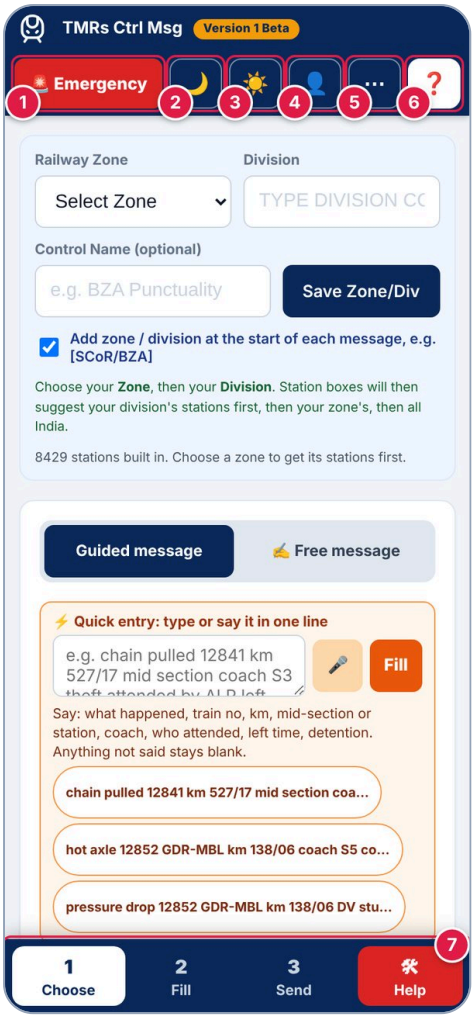

Right information · at the right time · in the right format

How to use this guide: every screen below is shown with red numbers. The numbered list next to it explains each number.

Not an official Railway tool. It only drafts wording; you always check and send.
All data stays on your phone.

1. The top bar and the 3 steps

The bar at the top of every screen stays visible while you scroll. The bar at the bottom shows where you are in the 3 steps: Choose → Fill → Send.

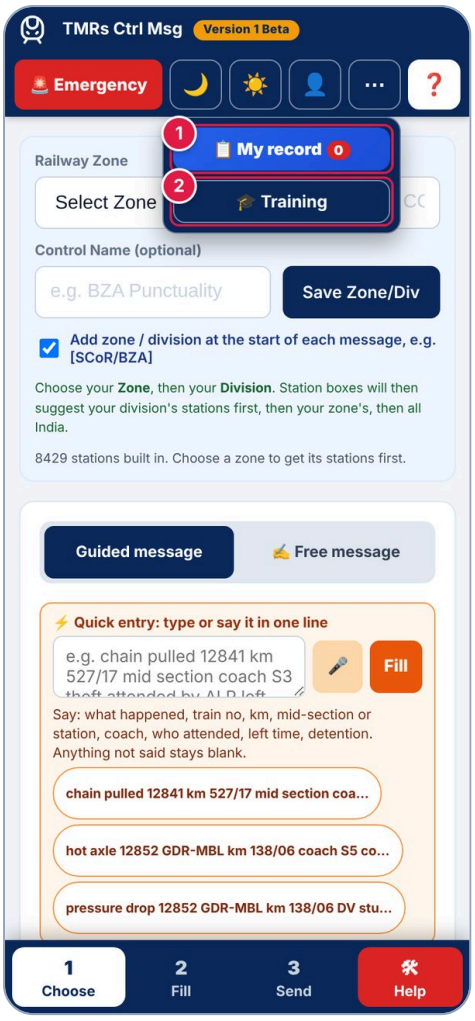

1. Emergency – one tap opens the Emergency window (voice, quick WhatsApp, call).
2. Night – dark screen for night duty. Tap again to go back.
3. Outdoor – high-contrast screen for bright sun.
4. My profile – your name, designation, phone, text size, backup.
5. More (⋯) – My record and Training.
6. Help – full help in English, తెలుగు, हिन्दी.
7. Step bar – 1 Choose, 2 Fill, 3 Send. Tap a number to jump.

EXAMPLE
Bright sun and cannot read the screen? Tap the sun button (3). Night duty in the guard compartment? Tap the moon button (2).

TIP
You can use the step bar to go back at any time. Nothing you typed is lost.

2. More menu: My record and Training

Tap ⋯ More (button 5 on the top bar) to open two less-used tools.

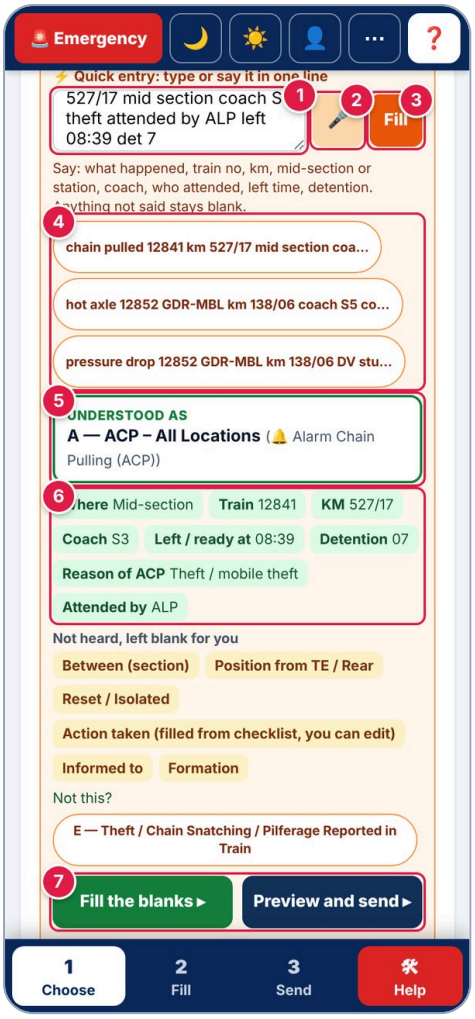

1. My record – your PME, training and other due dates, with a warning 30 days before.
2. Training – practice mode. Messages carry a TRAINING watermark so a practice message is never mistaken for a real one.

EXAMPLE
Enter your PME due date once in My record. The app shows a dot on ⋯ when something is due soon.

TIP
Use Training when teaching a new Guard or ALP. Nothing in Training is meant to be sent.

3. Quick entry: type or say it in one line

The fastest way. Type or speak one sentence about what happened. The app picks the scenario and fills the boxes it understood. Anything you did not say stays blank – it never guesses.

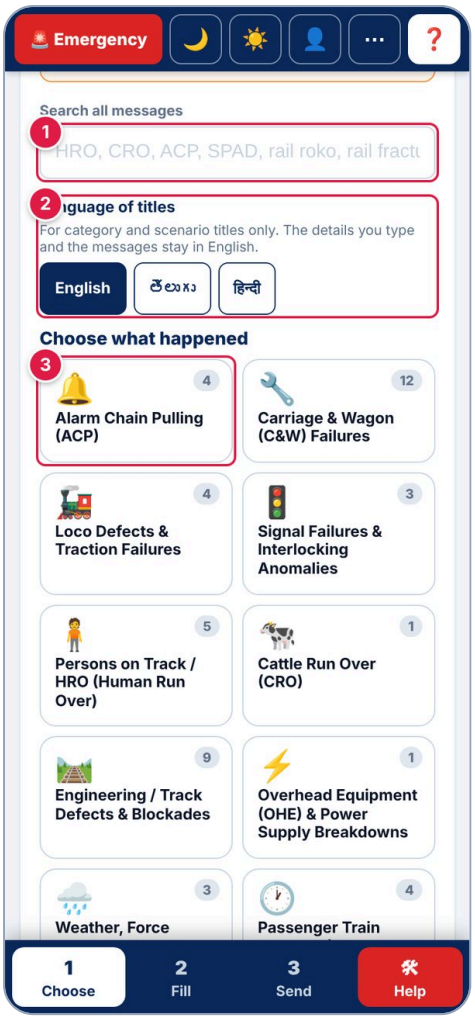

1. The box – type here. Say what happened, train number, km, mid-section or station, coach, who attended, left time, detention.
2. Microphone – speak instead of typing (needs internet; the phone's own voice typing).
3. Fill – tap to let the app understand your sentence.
4. Examples – tap one to try it.
5. Understood as – the scenario the app chose.
6. Green chips = filled from your sentence. Yellow chips = not heard, left blank for you.
7. Fill the blanks ▸ goes to step 2. Preview and send ▸ goes to step 3. "Not this?" lists other scenarios.

EXAMPLE
Say: “chain pulled 12841 km 527/17 mid section coach S3 theft attended by ALP left 08:39 det 7”. The app picks A – ACP All Locations, fills train 12841, km 527/17, coach S3, Left 08:39, Detention 07, Reason Theft, Attended by ALP.

TIP
Wrong scenario? Tap another one under “Not this?”. Use “Remember my word for this message” so the app learns your own word next time.

4. Choose what happened: tiles, language, search

Step 1 shows big tiles, one for each kind of event. Tap a tile, then pick the exact scenario.

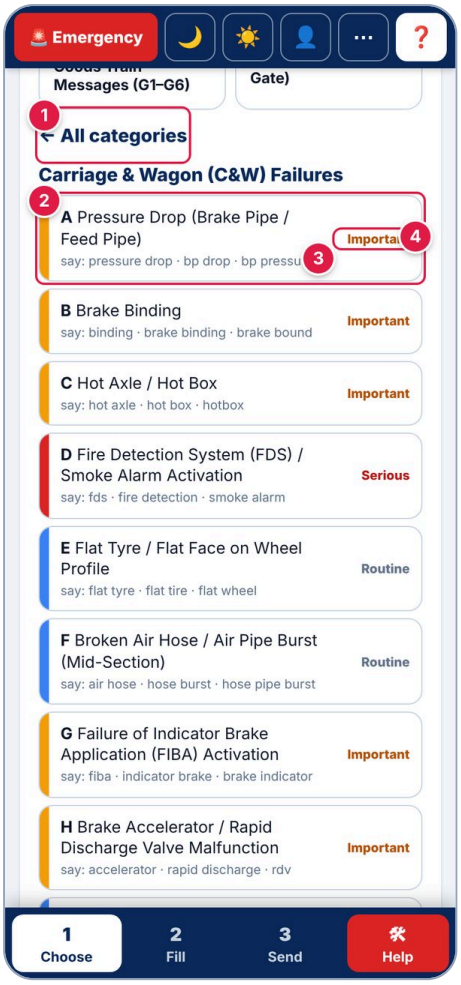

1. Search all messages – type a word or code (for example “rail fracture”, “drunken”, “G5.5”) and tap the result.
2. Language of titles – English, తెలుగు, हिन्दी. Changes only category and scenario titles. Boxes and messages stay in English.
3. A category tile, for example Alarm Chain Pulling.
4. Goods train messages have their own tile with a goods-train icon.

EXAMPLE
On a goods train? Tap the Goods tile (4). Passenger train chain pulling? Tap Alarm Chain Pulling (3).

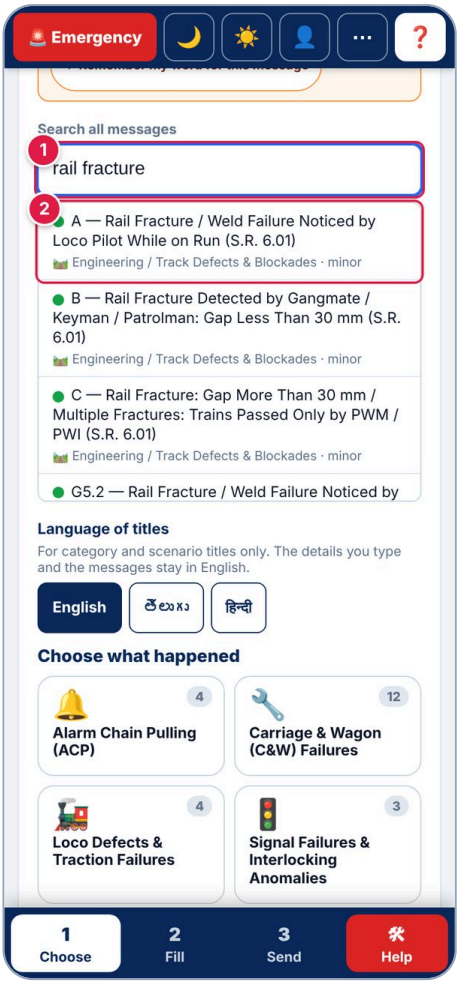

TIP
Changing the language of titles never changes the message that goes to Control.

5. Scenario list and search results

After a tile, you see every scenario in that category. Each row shows a title, a severity word and a short “say:” hint of words that find it.

1. All categories – go back to the tiles.
2. A scenario row – tap to open its form.
3. say: hints – the words that find this scenario in Quick entry.
4. Severity word – Routine, Important or Serious, so you know how urgent Control will treat it.

1. Search box – type part of a word or a code.
2. Result – tap the matching scenario to open it directly, in any category.

EXAMPLE

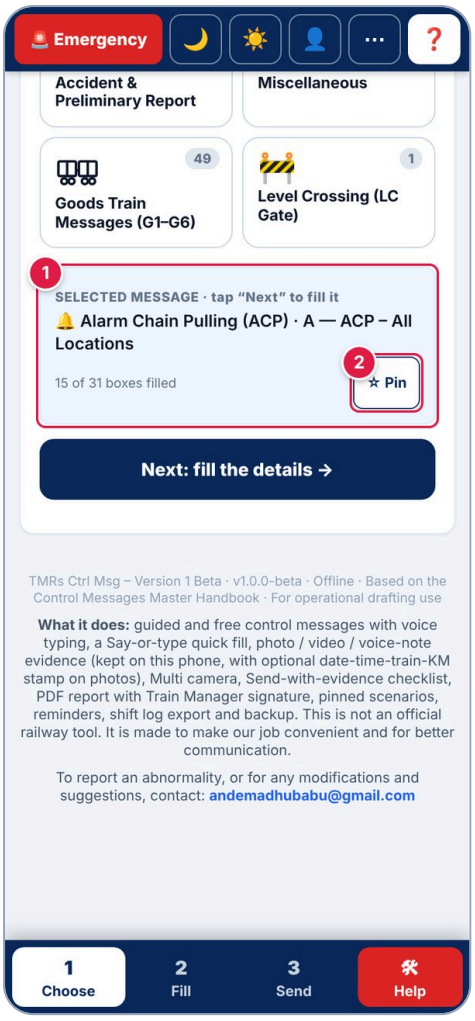

Type “rail fracture” in search and tap the first result. You land directly in the form.

TIP

Not sure of the category? Use search or Quick entry instead of tiles.

6. Selected scenario and Pin

On step 1, below the tiles, a card shows the message that is selected now. Tap “Next” to fill it.

1. SELECTED MESSAGE – the scenario that will open when you tap Next. To change it, use the tiles above or Quick entry.
2. Pin – keeps a scenario you use often at the top of the Choose list.

EXAMPLE

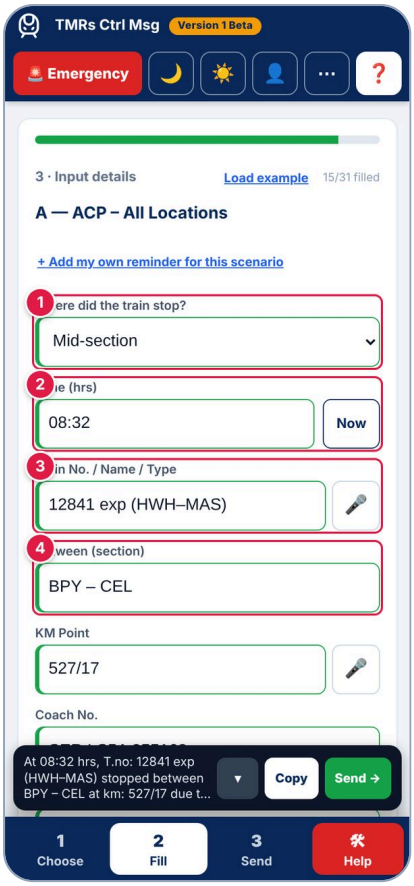

Mid-section ACP happens often on your trains? Pin it. Next time it is one tap away.

TIP

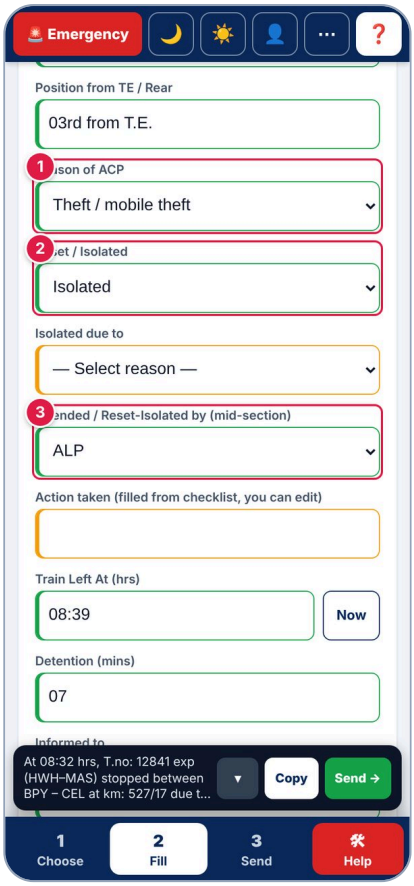

Pinned scenarios stay on this phone only.

7. Step 2 – Fill the boxes

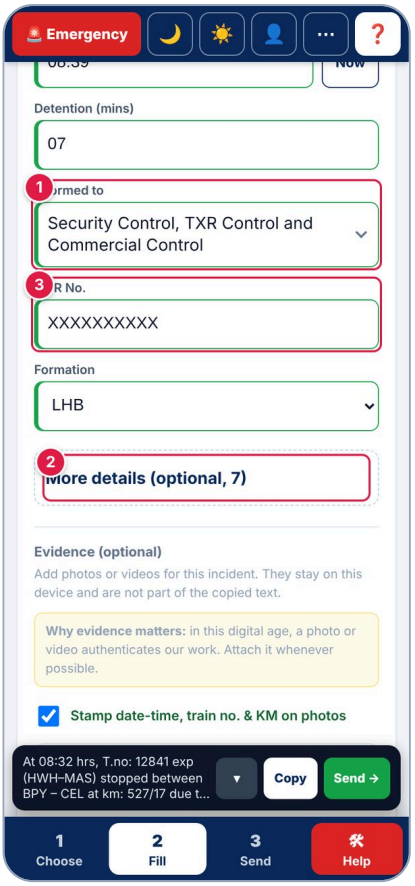

Each scenario has its own boxes. Fill only what you know. Blank boxes show as a blank (____) in the message so you can see what is missing.

1. Where did the train stop – pick Mid-section or type a station code. Station suggestions appear as you type.
2. Time – tap Now for the current time, or type it. Tap the microphone to speak.
3. Train number – type it. Five digits normally; the app warns if it looks wrong.
4. Section – the two stations between which the train is, for example BPY – CEL.

1. Reason – choose from the list given for this scenario.
2. Outcome – for example Isolated or Reset.
3. Attended by – ALP, Guard, RPF and so on.

1. Informed to – tick every officer or control you have informed.
2. More details – optional boxes. Open only if needed.
3. TMR No – your number. The app remembers it for next time.

EXAMPLE

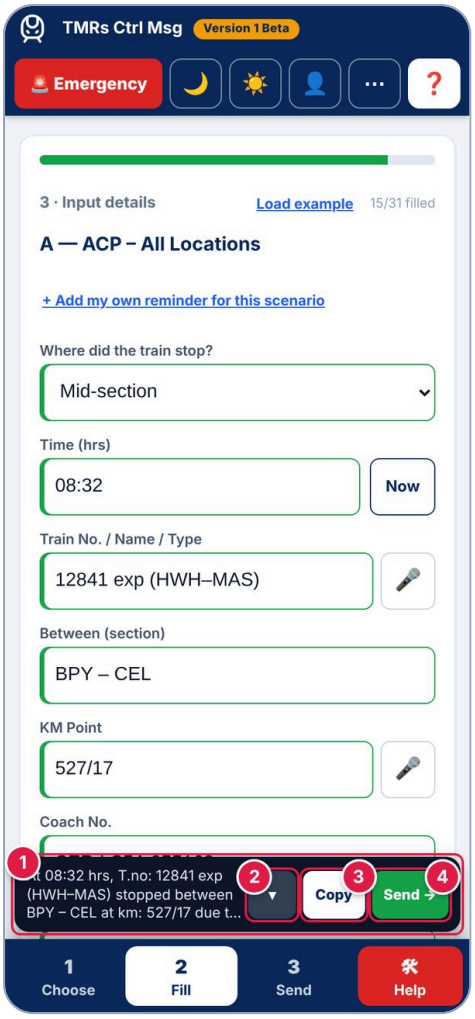

Mid-section ACP: Where = Mid-section, Time = 08:32, Train = 12841, Section = BPY – CEL, km = 527/17, Reason = Theft / mobile theft, Outcome = Isolated, Attended by = ALP, Informed = Security Control, TXR Control, Commercial Control.

TIP

Load example fills a sample so you can learn. Reset clears the form. Do not send an example.

8. The live message strip

While you fill, a small dark strip at the bottom shows the message being built. You always see what Control will read.

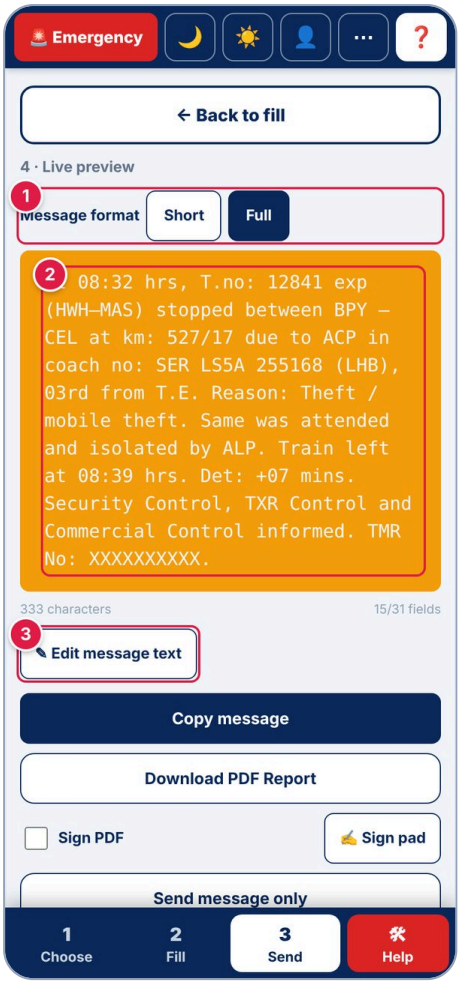

1. The strip – shows the first lines of the message as you type.
2. Arrow ▾ – opens the full message.
3. Copy – copies the message at once.
4. Send → – goes to step 3.

EXAMPLE
Fill the train number and watch it appear in the strip. Check the strip before you tap Send.

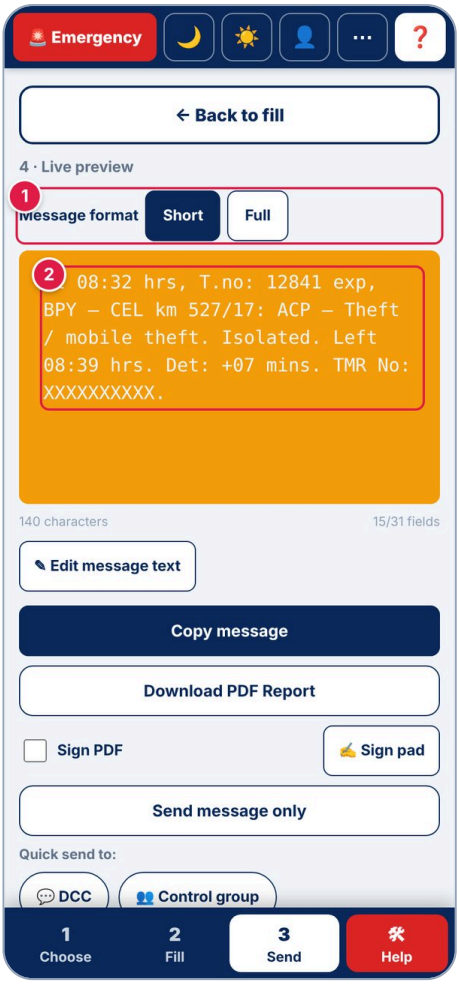

TIP
Words shown as ____ mean a box is still empty.

9. Step 3 – Send: Full, Short, Edit

Step 3 shows the finished message. Choose how long it should be.

1. Full / Short – Full has all details. Short is for a quick WhatsApp or SMS.
2. The message – exactly what will be sent.
3. Edit message text – change any word by hand before sending.

1. Short format – the same facts in fewer words.
2. The short message in the box.

EXAMPLE

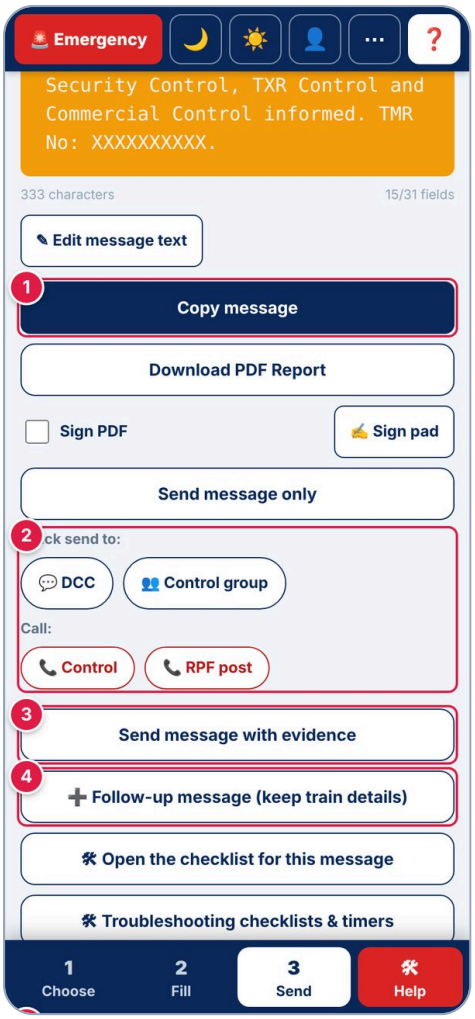

Poor mobile signal? Choose Short and send by SMS. Normal signal? Use Full.

TIP

Anything you edit by hand is sent as you edited it. Read it once more.

10. Ways to send

Below the message are the sending tools. Use the one that suits the situation.

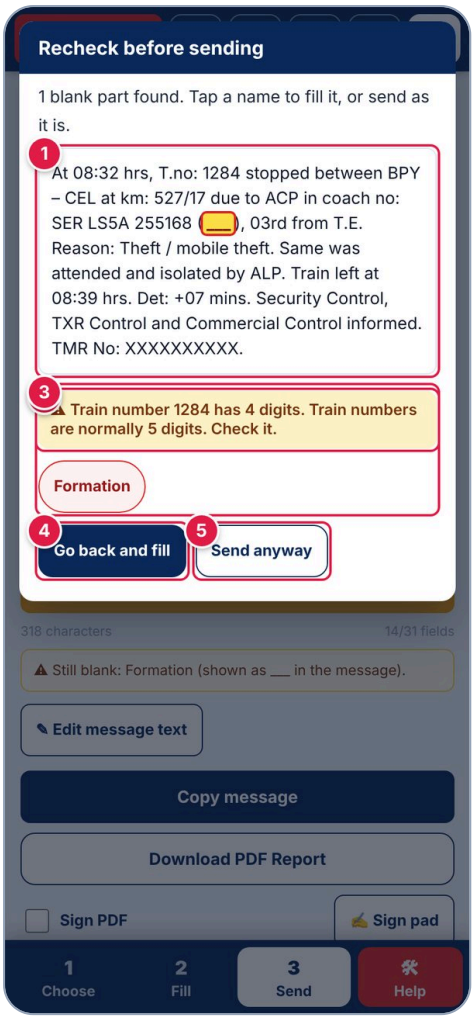

1. Copy message – copies the text. Paste it in WhatsApp or SMS yourself. Download PDF Report and Sign pad make a signed PDF.
2. Quick send to / Call – one tap to WhatsApp or SMS your saved contacts (DCC, Control group), or call Control, RPF post.
3. Send message with evidence – sends the message together with photos or video through the Share sheet.
4. Follow-up message – starts a new message and keeps the train details, so you do not type them again.
5. Open the checklist / Troubleshooting checklists & timers / Reports.

EXAMPLE
Mid-section stop: tap DCC (WhatsApp), then tap Control (call). Later use Follow-up when the train starts: “Train left 08:39”.

TIP
Add your DCC and Control contacts once in Station codes, contacts & backup (section 22). Without it, Quick send is empty.

11. Recheck before sending

If something looks wrong or is blank, the app stops you once and shows the Recheck window.

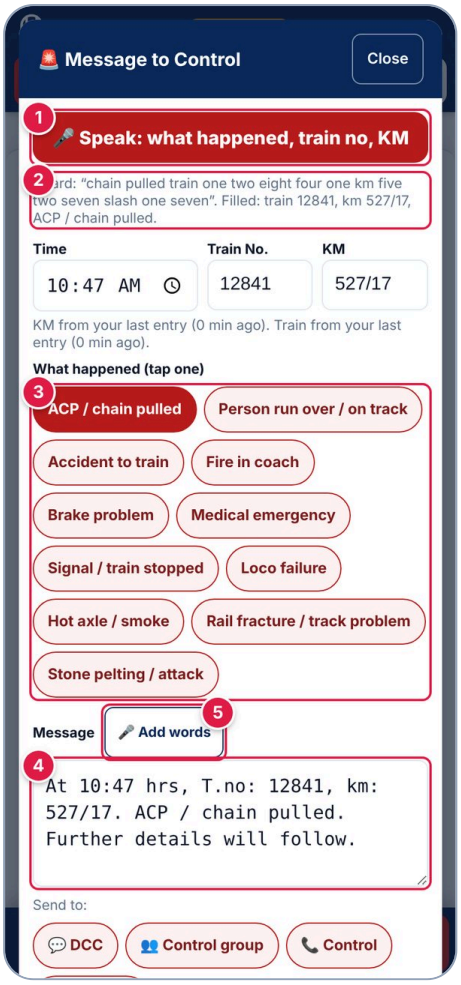

1. The message with blank parts marked.
2. Blank part – tap it to fill it right here.
3. Warnings – for example a train number that does not have 5 digits.
4. Go back and fill – return to the boxes.
5. Send anyway – you decide; the app only warns.

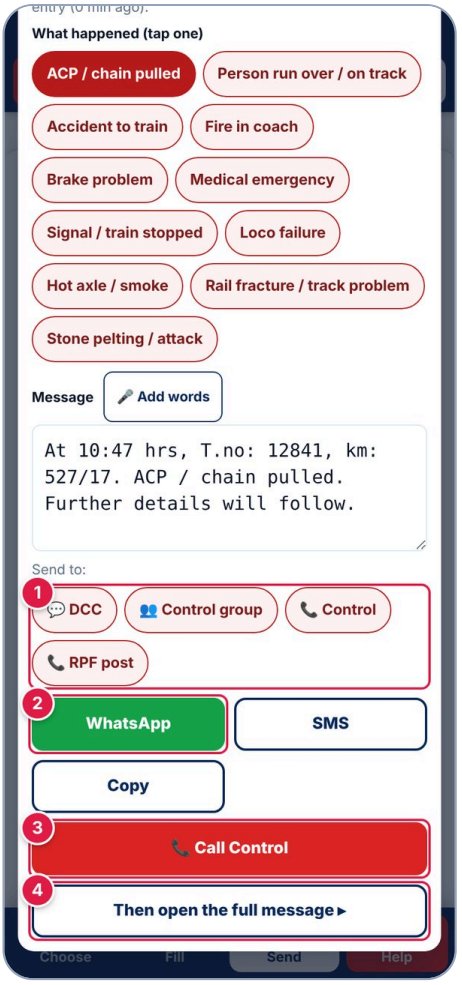

EXAMPLE
Train number typed as 1284 (4 digits). The window warns: “Train numbers are normally 5 digits. Check it.” You correct it before Control reads a wrong number.

TIP
In an emergency you may tap Send anyway. Fix the blanks later with a Follow-up message.

12. Emergency window

Tap the red Emergency button on the top bar. Use it when you are busy troubleshooting and need to inform Control in seconds, with voice.

1. Microphone – speak what is happening.
2. What you said appears here.
3. What happened – tap the nearest reason (ACP, brake problem, medical emergency and so on).
4. Message box – the quick message built from your words, time, train number and km.
5. Add words – speak to add more to the message.

1. Send to – your saved contacts (DCC, Control group) and calls (Control, RPF post).
2. WhatsApp / SMS – sends the message.
3. Call Control – opens the phone dialler.
4. Then open the full message – continue in the normal 3 steps.

EXAMPLE

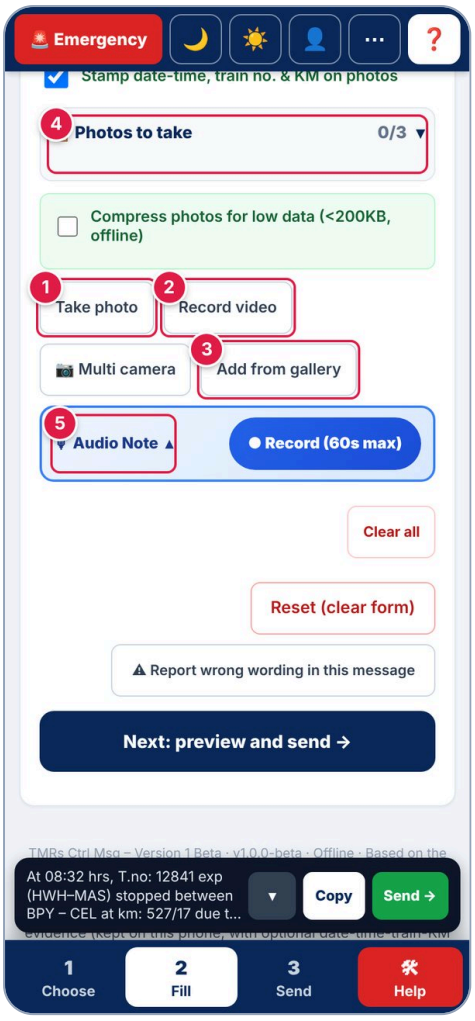

Say: "mid section brake binding 12841". The window builds a short message. Tap WhatsApp, then Call Control. After the train moves, open the full message for the report.

TIP

Add Control contacts first (section 22), or the window has nobody to send to. Voice needs internet.

13. Evidence: photos, video, audio note

Spot evidence helps Control and the officials. Add it in step 3.

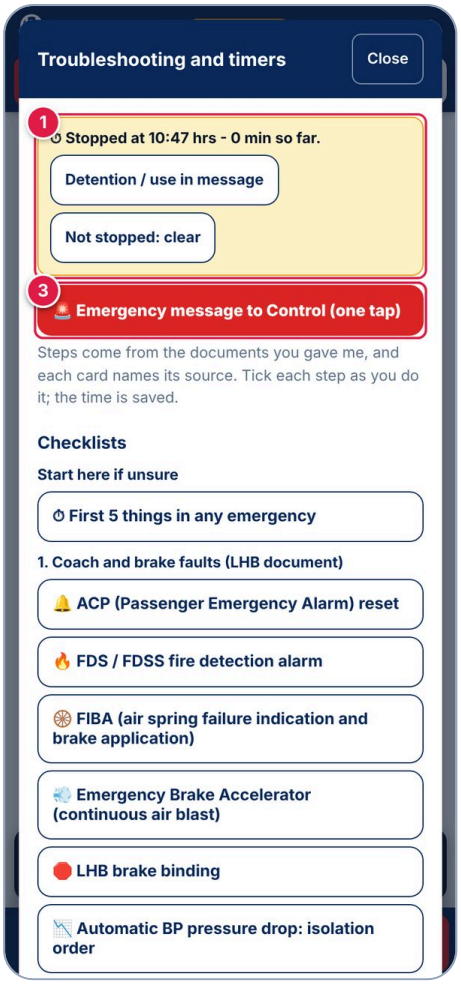

1. Take photo – opens the camera.
2. Record video – records a short video.
3. Add from gallery – pick files you already have.
4. Photos to take – a list of what to photograph for this scenario (for example 0/3).
5. Audio Note – record up to 60 seconds of your voice.

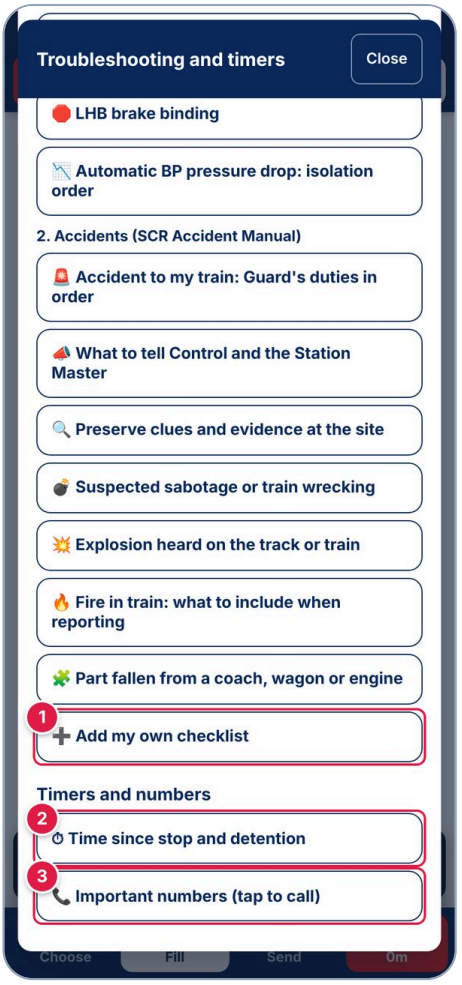

EXAMPLE
Rail fracture: take the photos on the list, tick them off, then tap Send message with evidence.

TIP
Compress photos for low data keeps files small (under 200 KB) for weak signal. Photos are stamped with date, time, train number and km if you tick that option.

14. Troubleshooting checklists and timers

Open from step 3 (Troubleshooting checklists & timers) or from Help. Step-by-step lists for common failures. Only text from the documents supplied is used.

1. Banner – shows the train, if you came from a message.
2. Emergency message to Control (one tap) – goes to the Emergency window.
3. A checklist card – tap to open it.

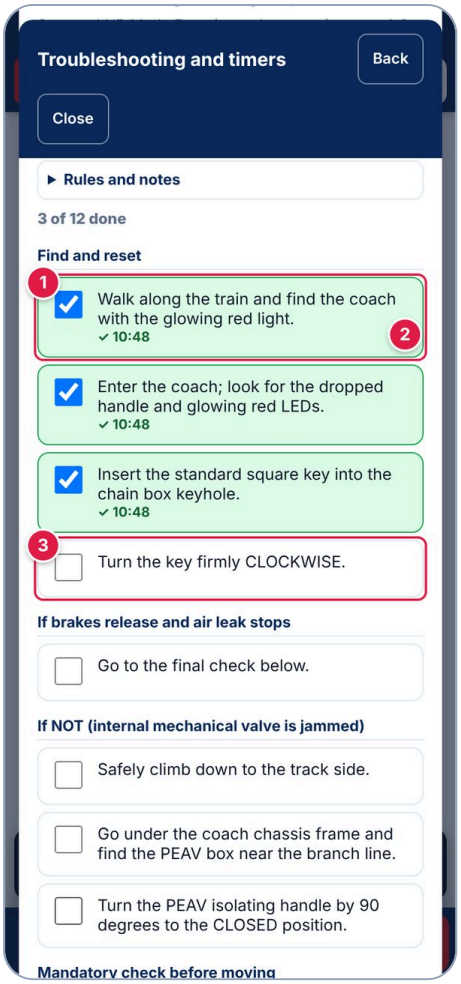

1. Add my own checklist – write your own steps.
2. Time since stop and detention – the timers.
3. Important numbers (tap to call) – your numbers list.

EXAMPLE
Brake binding on a coach: open the C&W checklist, tick each step as you do it.

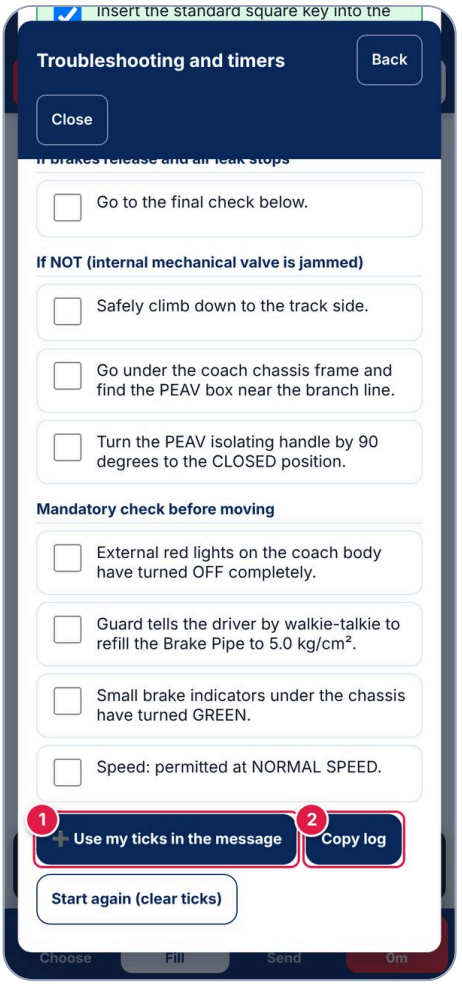

TIP
Your own checklists are saved on the phone.

15. Using a checklist card

Each card has steps. Tick a step when done: the app stamps the time next to it.

1. A ticked step (green).
2. The time the step was ticked.
3. An open step, not yet done.

1. Use my ticks in the message – puts the done steps in the message as Action taken.
2. Copy log – copies the steps with times.

EXAMPLE

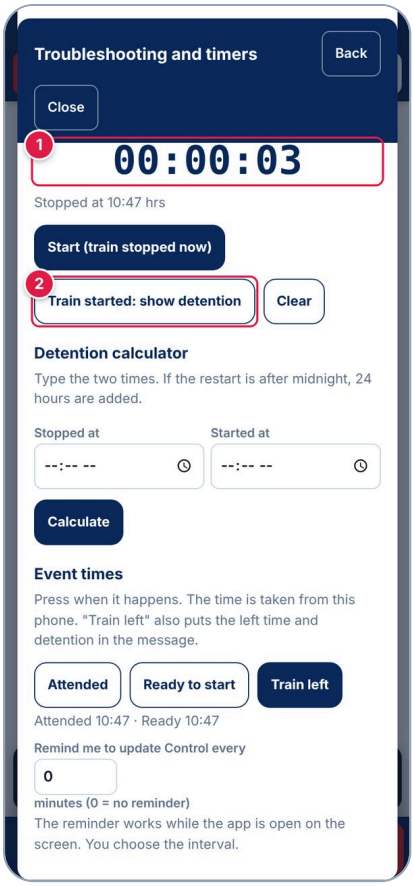

Tick “Insert the standard square key” at 10:48. The message can say what you did and when.

TIP

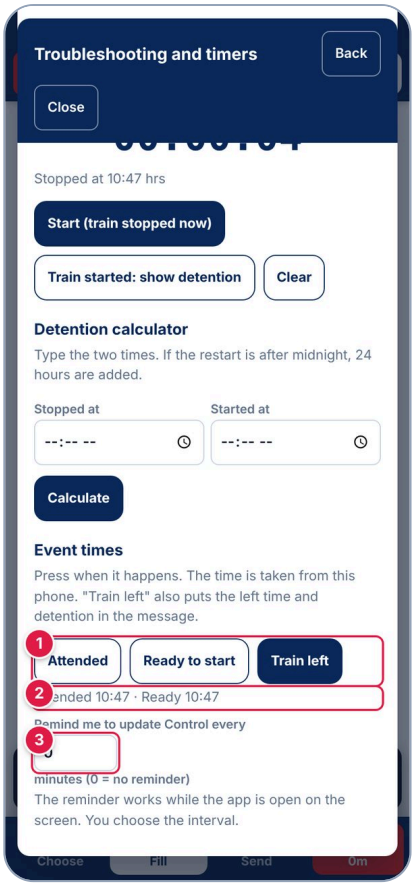

Open “Rules and notes” on the card for the written rules from the documents.

16. Timers, event times and detention

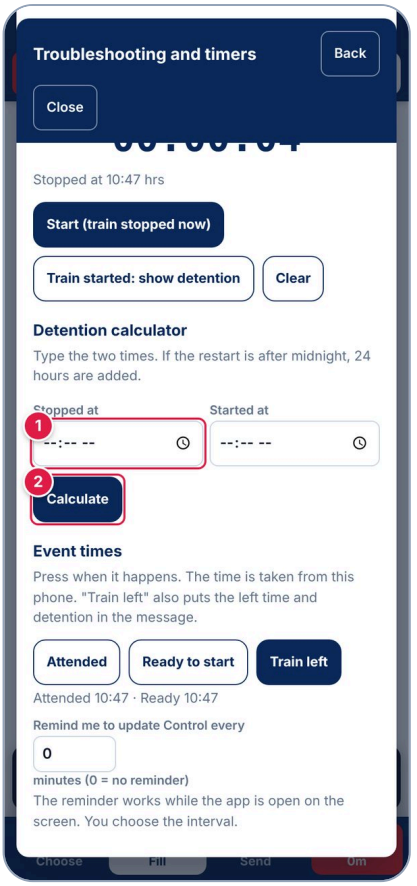

The stop timer starts by itself when you open a stopping message. It shows how long the train has been stopped.

1. Time since stop – running clock.
2. Train started: show detention – tap when the train moves.

1. Event times – stamp Attended, Ready, Train left with one tap each.
2. The stamped times list.
3. Reminder – minutes after which the app reminds you to update Control (0 = none).

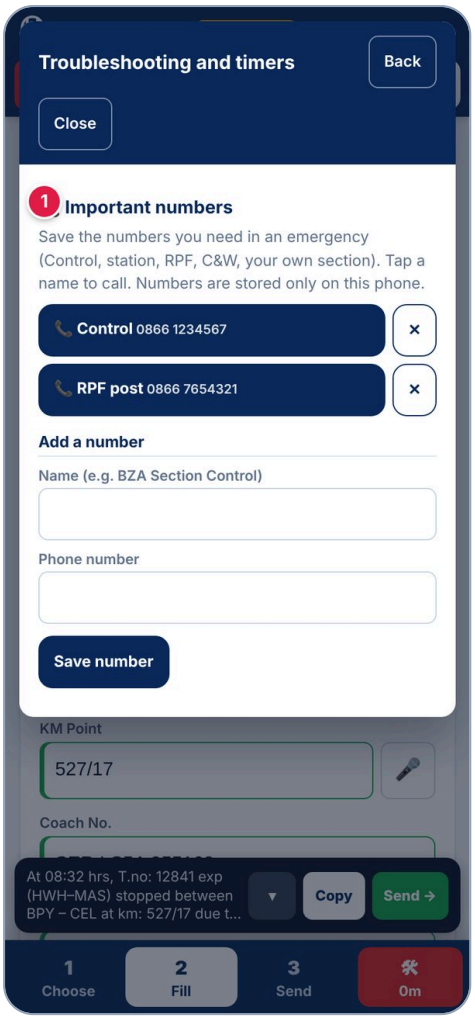

1. Start time – type when the train stopped.
2. Calculate – shows the detention in minutes.

EXAMPLE
Stopped 08:32, tap “Train started” at 08:39: detention 07 minutes. Put it in the message.

TIP
The reminder alarms only while the app is open. Do not depend on it alone.

17. Important numbers

Your own list of phone numbers (Control, RPF post, hospital and others). Tap a number to call.

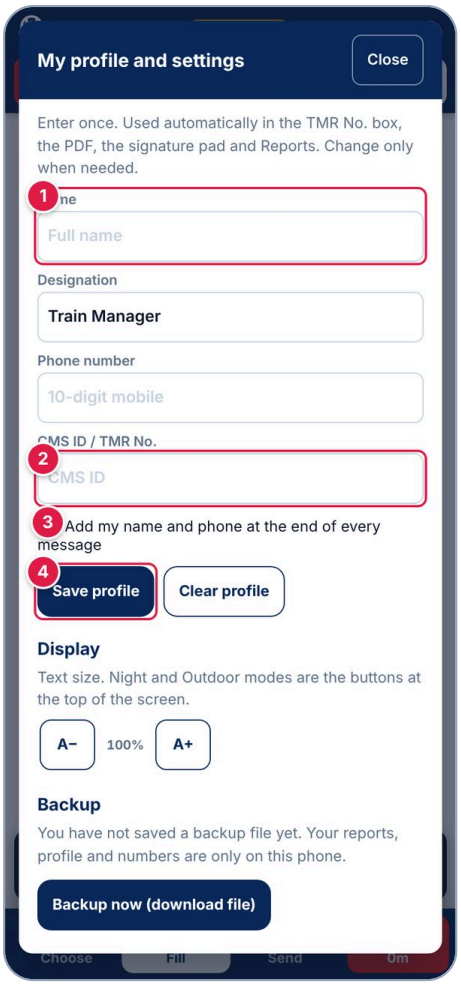

1. Important numbers – the list. Tap to call. Add or remove numbers here.

EXAMPLE
Add “Control – 0866 1234567”. In an emergency tap it and the phone dials.

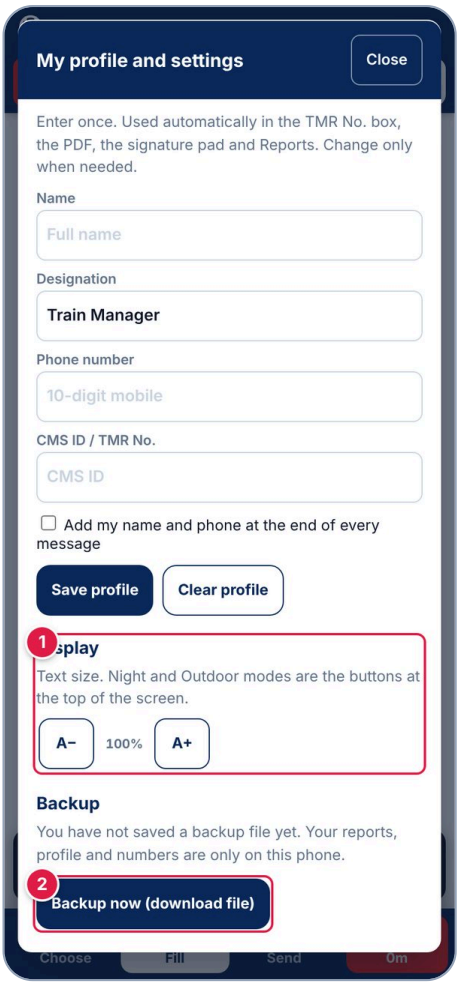

TIP
The app has no numbers of its own. Everything you add stays on your phone.

18. My profile

Tap the person button on the top bar. Fill once; the app uses it every time.

1. Name and designation, phone number.
2. CMS ID.
3. Add my name and phone at the end of every message – tick to sign off messages.
4. Save profile.

1. Display – text size, so you can read easily.
2. Backup now (download file) – saves all your settings, contacts and records in a file. Restore it on a new phone.

EXAMPLE

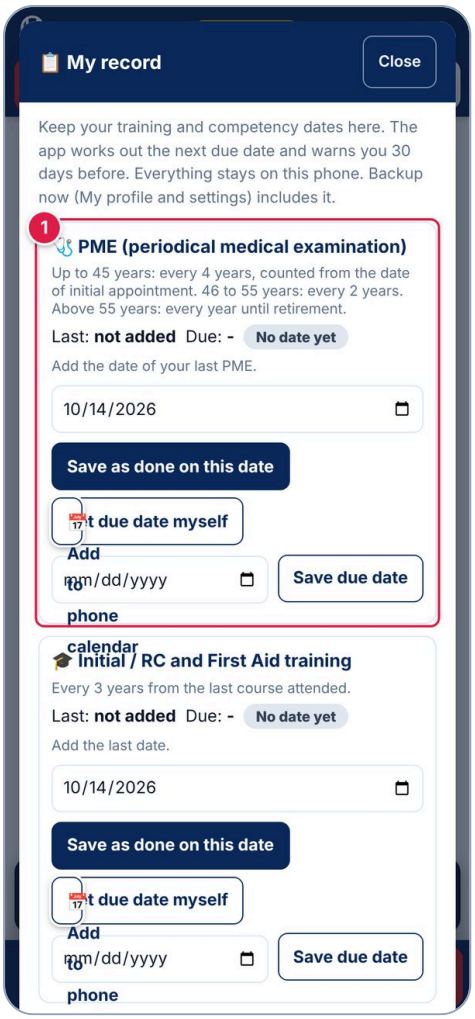

Name: your name, Designation: Train Manager, Phone: your number. Tick the sign-off box. Every message now ends with your name and phone.

TIP

Take a backup now and then. If you change the phone, restore it from the file.

19. My record

Open from ⋯ More. Keep your PME, refresher training and other due dates in one place.

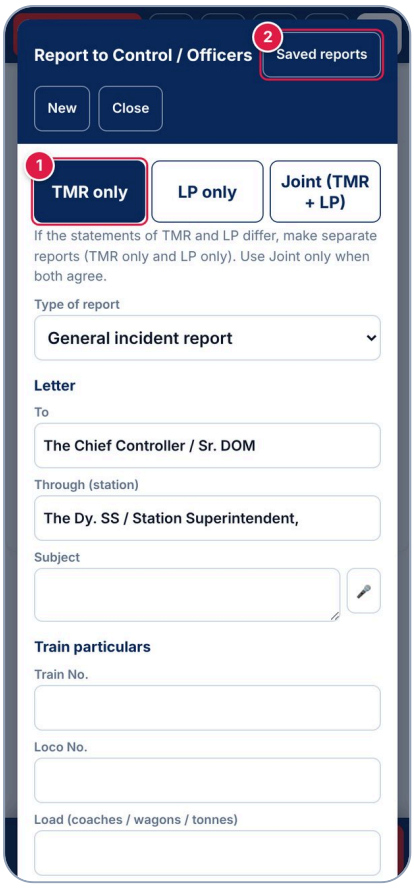

1 Your records – each shows the due date and how many days are left. A warning shows 30 days before the date. You can add the date to the phone calendar.

EXAMPLE
Add “PME due 15-01-2027”. In December the app shows it is due soon.

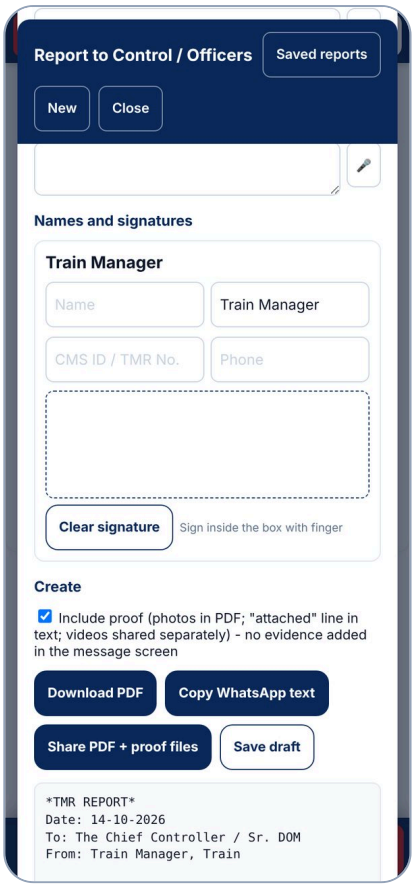

TIP
Dates stay on your phone only.

20. Report to Control / Officers

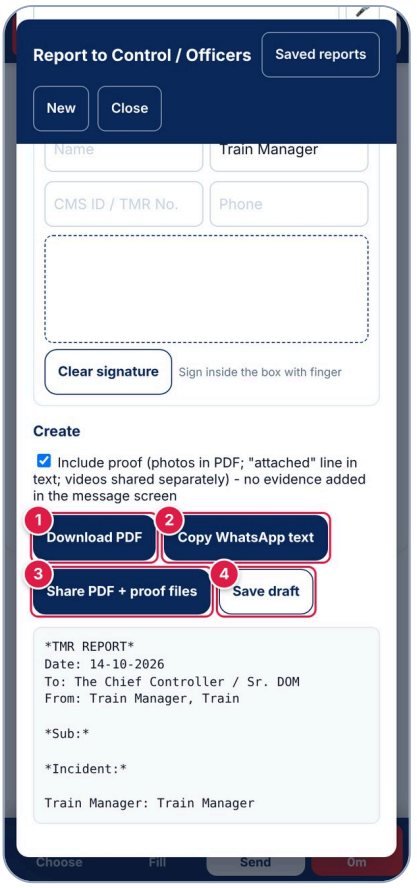

Open Reports from step 3. Prepare a full report for Control or Officers: TMR, Loco Pilot or Joint report.

1. Report type – choose TMR, LP or Joint.
2. Saved reports – open reports you saved as drafts.

1. Signature pad – sign with your finger. Use the same pad to sign a PDF.

1. Download PDF – a signed PDF.
2. Copy WhatsApp text – plain text for WhatsApp.
3. Share PDF + proof files – send the PDF and your photos together.
4. Save draft – finish later.

EXAMPLE

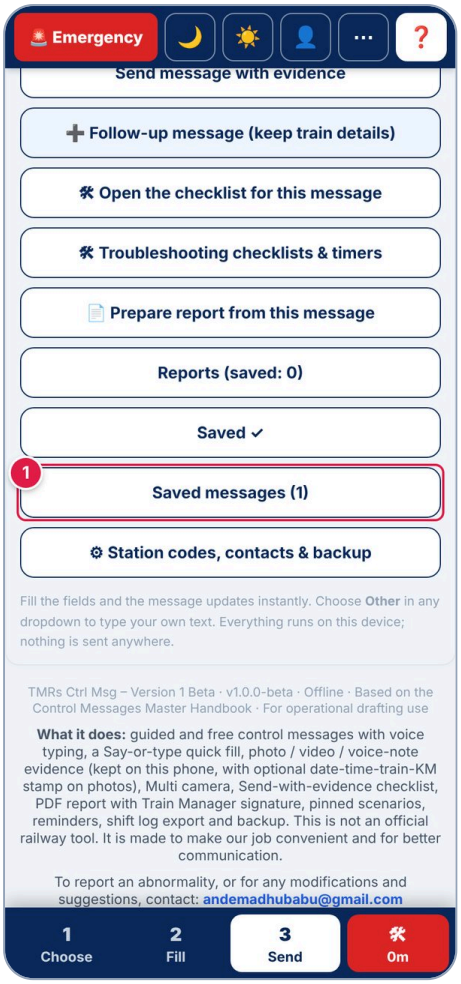

After the train reaches the station: Reports, choose TMR, check the details, sign, tap Share PDF + proof files and pick WhatsApp.

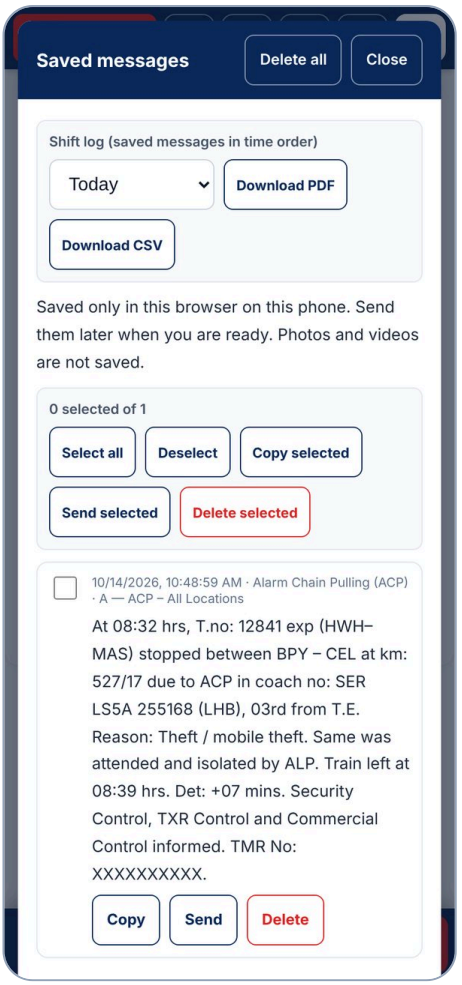

TIP

The report uses the details you already filled. Check names and numbers once more.

21. Save for later and Saved messages

Save a message on the phone so you can find it again, for example at the end of the shift.

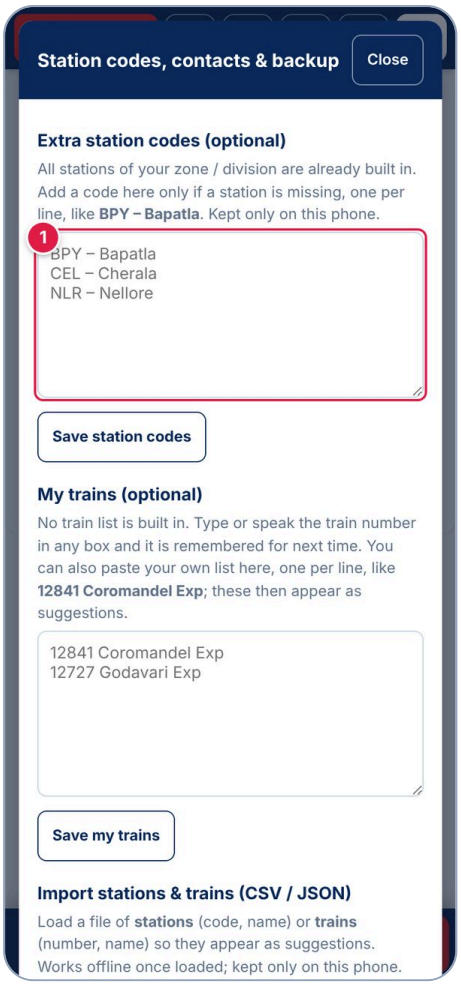

1 Saved messages – opens the list of messages you saved.

EXAMPLE
Open Saved messages at the end of duty. From there you can make a shift log as PDF or CSV and open any saved message again.

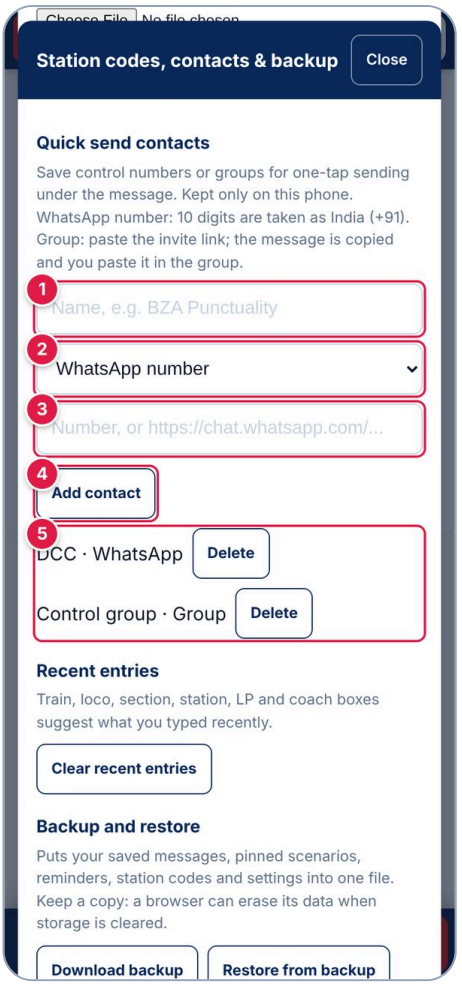

TIP
Saved messages stay only on this phone. Include them in the backup.

22. Station codes, contacts & backup

At the bottom of step 3. Set this up once; it makes Quick send and Emergency work.

1. Extra stations – one per line, for example “BPY – Bapatla”. They appear in station suggestions.
2. Name – for example DCC.
3. Kind – WhatsApp, SMS or Group link.
4. Number or link – a phone number or a WhatsApp group link.
5. Add contact.

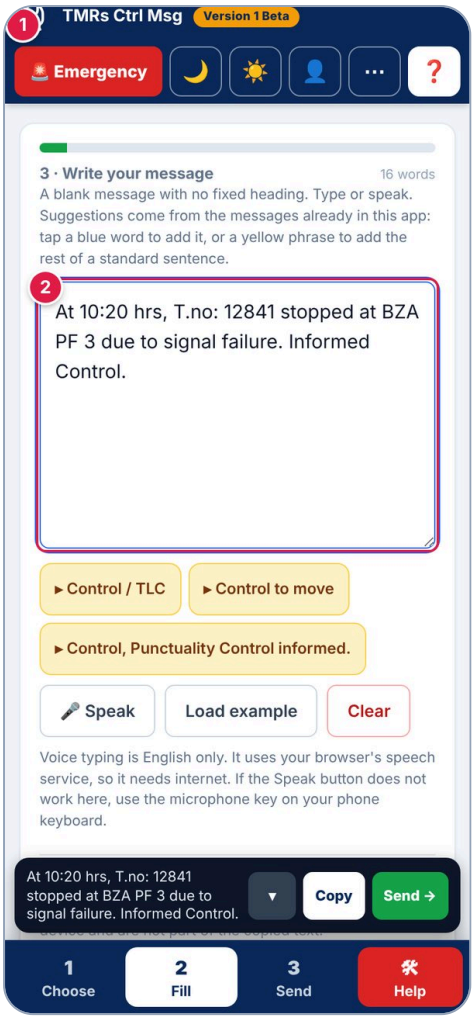

1. Name, kind, number, Add – add more contacts.
2. Your saved contacts – these become the Quick send buttons and the Emergency WhatsApp buttons.

EXAMPLE
Add: DCC, WhatsApp, 919999999999. Add: Control group, Group link, https://chat.whatsapp.com/… . Both now appear as buttons in Send and in Emergency.

TIP
This tool also keeps My trains, recent entries and Backup / Restore. Numbers are stored only on this phone.

23. Free message mode

When no scenario fits, write your own message.

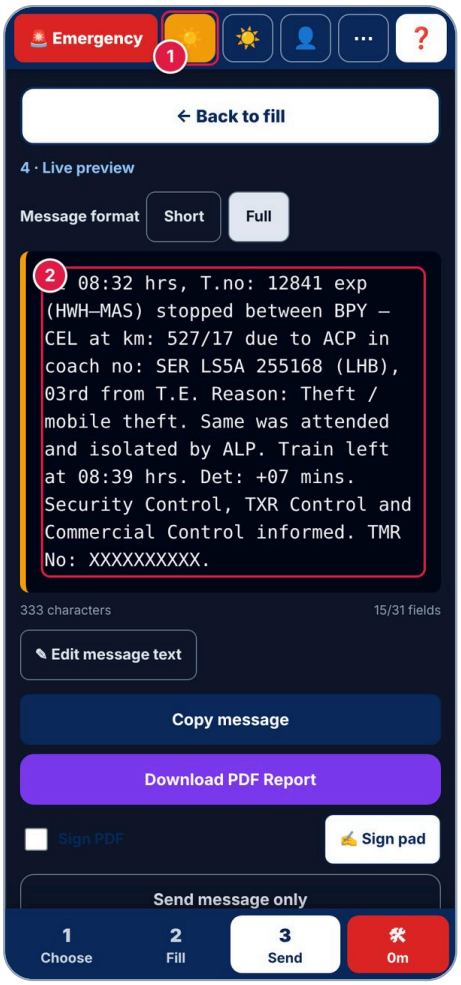

1. Free message – switch from Guided to Free (button on the Choose step).
2. Text box – type or speak your message, then go to Send.

EXAMPLE
Something unusual happened: choose Free message, write what happened and send it like any other message.

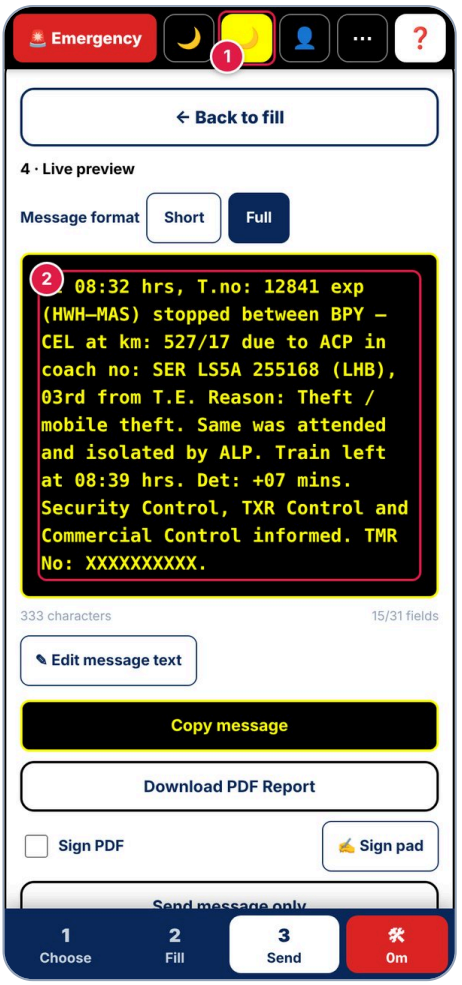

TIP
Free messages are not checked by the app. Include train number, place and time.

24. Night and Outdoor screens

Both buttons sit on the top bar, so you reach them at any time.

1. Night button – dark colours, easy on the eyes in a dark compartment.
2. The message in night colours.

1. Outdoor button – strong black-and-white contrast for bright sun.
2. The message in outdoor colours.

EXAMPLE

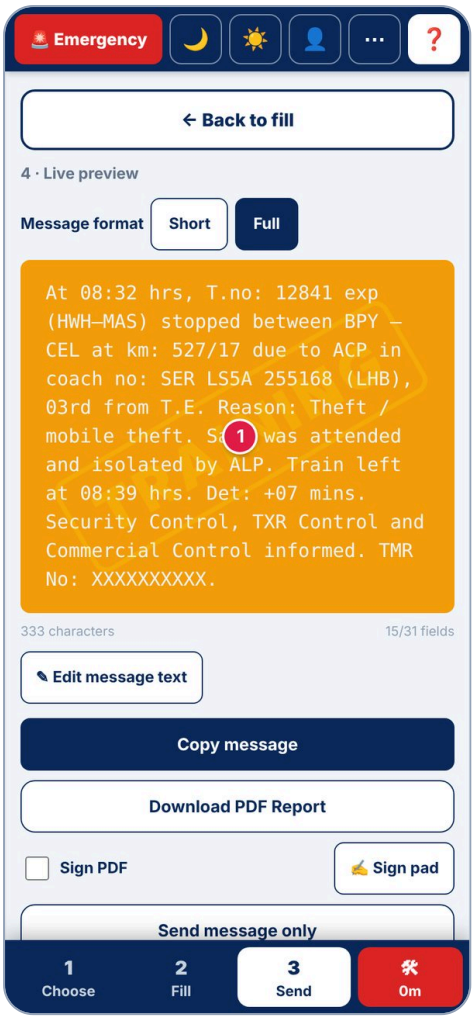

Walking on the track in the afternoon? Tap Outdoor. In the guard compartment at night? Tap Night.

TIP

Tap the same button again to return to normal. The screen remembers your choice.

25. Training mode

Open from ⋯ More. Practise without any risk of a false message.

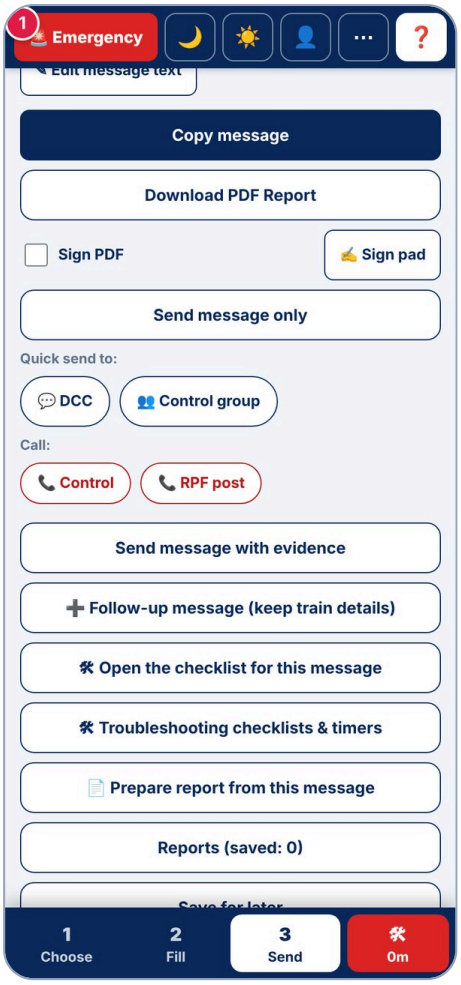

1. TRAINING watermark – shown over the screen and on the message.

EXAMPLE
Teach a new ALP: open Training, fill an example, see the message. Nothing is meant to be sent.

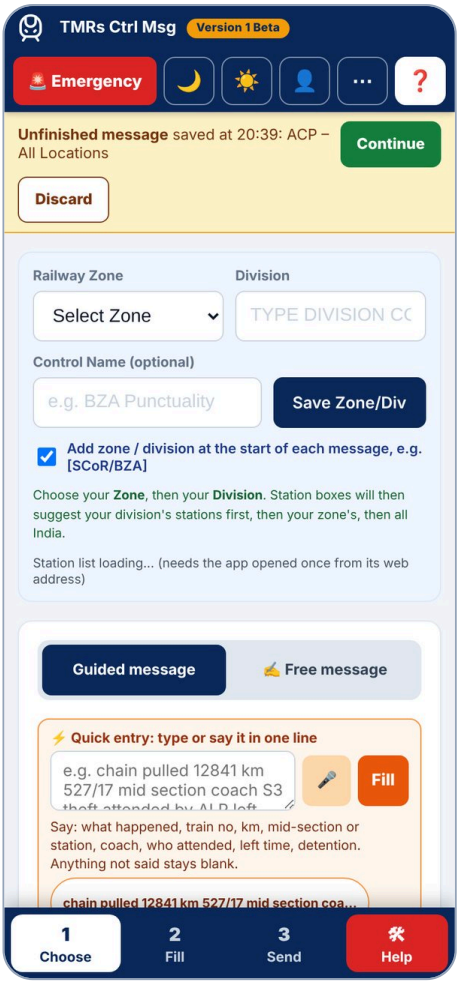

TIP
Leave Training mode before real duty.

26. Follow-up message and unfinished message

Control often needs a second message: train started, arrangements made. Also, if the phone closes the app, your work is not lost.

1. Follow-up note – train details kept from the first message. Change only what is new (for example Left at).

1. Unfinished message bar – appears when you open the app again.
2. Continue – brings back your boxes.
3. Discard – starts clean.

EXAMPLE
After the first message, tap Follow-up. Train 12841, section and km are already there; add “Left 08:39”.

TIP
The screen stays on while you fill a message, and the phone vibrates on important warnings.

27. Offline use, install and safety notes

• Install: open the app link in Chrome, choose “Add to Home screen”. It then opens like any app and works without internet.
• Voice (microphone) needs internet because it uses the phone's own voice typing.
• Your numbers, contacts, records and saved messages stay only on your phone. Use Backup now to keep a copy.
• The app only drafts the message. It does not send anything by itself. You always check and send.
• Report wrong wording – use the button at the bottom of step 3 if any word or rule looks wrong.
• The app holds only the rules and wording given from official documents. When in doubt follow the rule book and Control's orders.
